NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

Center: Washington University Genome Sequencing Center

Web site: http://genome.wustl.edu/gsc

code: WUGSC

Contact: sapiens@watson.wustl.edu Center project name: H_NH0725C19 Summary Statistics

This sequence was finished as follows unless otherwise noted:

chemistry, or covered by high quality data (i.e., phred quality >= 00); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by all regions were double stranded, sequenced with an alternate restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McDherson, Department of Genetics, Washington University, St. Louis MG. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:

donor, as described by Oscegawa, K., Woon, P.Y., Zhao, B., Frengen, E. Tateno, M., Catanese, J. J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from and coworkers at http://www.resgen.com) or Pieter de Jong VECTOR: DRACA23 & The RPCI-11 human BAC library was made from the blood of one VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the left is RPI1-8P17, 2000 bp overlap. Actual start of this clone is at base position 185268 of RPI1-393A12; actual end is at base position 64196 of RPI1-725C19.

Polymorphisms exist between AC013365 and AC110804. Location/Qualifiers 1. .64196

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```

```
This sequence represents cDNA encoding a rat neutral amino acid transporter, LAT1. It interacts with a 528 amino acid protein (AAY58427) to effect neutral amino acid transport. LAT1 is predicted to have up to twelve transmembrane domains from hydropathy analysis. The protein, and nuclealc acids encoding it are useful for the in vitro analysis of

```
substrate selectivity to neutral amino acids, and which is inactivated by an amino acid transport activating factor 4F2hc (4F2 heavy chain). The neutral amino acid transporter and its gene are useful in in vitro analysis of permeation of drugs and poisons through cell membrane, blood and tissues. The present sequence represents cDNA encoding the rat L-type amino acid transporter 2 (LAT2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A neutral amino acid transporter having broad substrate selectivity useful for in vitro analysis of permeation of drugs and poisons through cell membranes, blood and tissues -

WPI; 2001-457740/49. P-PSDB; ABB12114. Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis and cancer

Claim 1; Page 918-919; 1963pp; English.

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides of the invention. Although novel, many of the polypeptides of the invention. Although novel, many of the polypeptides of the invention. Although novel, many of the polypeptides of the invention. The polypeptides of the invention are polypeptides of the invention. The polypeptides of the invention may differential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell differentiation activities, including cytokine, cell proliferation or cell differentiation activities, seem cell growth factor activities; chemotactic or chemokinetic activities; haemostatic, thrombolytic activities, receptor or ligand activities, or may be used in oncogenesis, receptor or ligand activities, or may be conditions include conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell cancers, haematopoietic disorders (e.g., asthma or arthritis), proliferative retinopathy, atherosclerosis, coronary heart disease, proliferative retinopathy, atherosclerosis, coronary heart disease, proliferative retinopathy, atherosclerosis, coronary heart disease, proliferation for nucleic acids encoding them) may be used to promodulatory activities may be used in the treatment of viral, and almondulatory activities may be used in the treatment of viral, and almondulatory activities may be used in the treatment of viral, may be used in the used to any be used to any be used in the readers of the used to any be used in the readers of the anyment of a very of promote cell growth. For example, or all seases, and the properties an that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a CDNA encoding a novel human polypeptide of the invention.

haematopoiesis regulation; tissue growth; immunomodulator; activin;

The present invention describes a cell surface protein which is an L-type amino acid transporter-1 (LATI), which mediates the transport of neutral amino acids, leucine, isoleucine, phenylalanine, methionine, tyrosine, tryptophan, value and histidine, into the cell independently of sodium ions. The LATI protein conjugates with the cell membrane surface molecule 4F2. Antisense DNA or RNA, antibodies, antibodos fragments, and peptide and non-peptide antagonists to IATI are useful as anticancer agents. The present sequence encodes human LATI, which is specifically claimed in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GCACCATCATTGGAGCAGGAATCTTCATCTCCTAAGGGCGTGCTCCAGAACACGGGCA 451
